

A high-complexity CLIA accredited laboratory, Solaris Diagnostics assists clinicians and health care providers to quickly identify the pathogens and underlying causes of disease.

We know better patient outcomes are achieved through fast, accurate, and reliable laboratory results.

## Bacterial Vaginosis and Vaginitis Panels, Basic and Plus

**Burning, itching, an unpleasant odor, and unusual discharge are all symptoms which may indicate the presence of bacterial vaginosis or yeast caused candidiasis.**

### Solaris's Bacterial Vaginosis Panels:

- Estimate the quantity of normal vaginal flora and compare with pathogenic species
- Detect 10 pathogenic species causing bacterial vaginosis
- Provide the results in text and graphical format.
- Provide suggestive treatment of BV based on the results
- Monitor the efficacy of antimicrobial therapy
- Can detect Aerobic vaginitis and Candidiasis

### Now you can provide patients the quickest and most accurate diagnosis possible.

- Results by 5 p.m. on the day the lab receives the specimen
- Can be performed along with PAP Smear
- Identifies pathogens which are difficult to culture
- Identifies bacteria after recent antibiotic use
- Yields greater than 95% analytical sensitivity and specificity
- Simplicity of single sample collection
- Direct access to experienced scientific staff
- Personal customer service experience

### Pathogens Detected

Bacteroides fragilis  
Mycoplasma hominis  
Mobiluncus curtisii & mulieris  
Ureaplasma urealyticum  
Prevotella bivia  
Enterococcus faecalis  
Candida Species  
Staphylococcus aureus  
Reflex to MRSA  
Staphylococcus agalactiae (GBS)  
Escherichia coli  
Trichomonas vaginalis

### BV Basic

Atopobium vaginae  
BVAB2  
Gardnerella vaginalis  
L. crispatus/ gasseri/ iners/ jense  
Megaspheara 1 & 2
